Overview
Eveko is a central nervous system stimulant prescription medicine used for the treatment of narcolepsy, Attention-Deficit Hyperactivity Disorder (ADHD), and exogenous obesity.

Coverage Guidelines
Approval of generic Eveko® will be granted if the member meets the following diagnosis specific criteria:

Attention Deficit Hyperactivity Disorder (ADHD):
1. Member has a diagnosis of ADHD AND  
2. Prescriber has provided documentation of an inadequate response, adverse reaction, or contraindication to a trial (defined as >7 days of therapy) of at least ONE generically available amphetamine product

Narcolepsy:
1. Member has a diagnosis of narcolepsy AND  
2. Prescriber has submitted medical records documenting the results of the sleep study [polysomnogram (PSG) or Multiple Sleep Latency Test (MSLT)] used to confirm narcolepsy AND  
3. Prescriber has provided documentation of an inadequate response, adverse reaction, or contraindication to a trial (defined as >7 days of therapy) of at least ONE generically available amphetamine product

Please note: Additional criteria may apply for members under the age of 18. Please refer to the MassHealth Pediatric Behavioral Health Medication Initiative guideline for criteria.
Continuation of Therapy
Reauthorization require documentation by prescriber that indicates a positive response to therapy.

Limitations
  1. Initial and reauthorization approvals may be granted for up to 1 year

Appendix:
Adverse reactions/contraindications to stimulants include but are not limited to weight loss or failure to gain weight, insomnia, agitation, increased anger and aggression, tic disorder, seizures w/ ADHD, traumatic brain injury w/ ADHD (trial of both a methylphenidate product and amphetamine product is required for approval), symptomatic heart disease in children (tachycardia or hypertension), symptomatic heart disease in adults (there should be at least 1 failed trial of another non-stimulant medication that may be used for ADHD such as bupropion.)
