Overview

Korlym (mifepristone) is a cortisol receptor blocker indicated to control hyperglycemia secondary to hypercortisolism in adult patients with endogenous Cushing's syndrome who have type 2 diabetes mellitus or glucose intolerance and have failed surgery or are not candidates for surgery

Coverage Guidelines

Authorization may be granted for members who are currently receiving treatment with Korlym, excluding when the product is obtained as samples or via manufacturer's patient assistance programs

OR

Authorization may be granted if the member meets all following criteria and documentation has been submitted:

1. The member is diagnosed hyperglycemia secondary to hypercortisolism with endogenous Cushing syndrome who have type 2 diabetes mellitus or glucose intolerance
2. The member is ≥ 18 years of age
3. The member has had an inadequate response or adverse reaction to one or contraindication to both of the following: ketoconazole tablets, Lysodren tablets.
4. The member has failed surgical intervention (recurrence after surgery or failed tumor removal)

OR

5. Surgical interventions are not appropriate.

Continuation of Therapy

Reauthorization requires clinical documentation of clinical response.

Limitations

1. Initial approvals will be issued for 6 months

2. Reauthorization will be issued for 12 months
3. The following quantity limits apply:

Korlym 300mg	120 tablets per 30 days
--------------	-------------------------
