Overview

Cetirizine hydrochloride is a histamine-1 (H1) receptor antagonist. Quzyttir is an intravenous formulation of cetirizine hydrochloride indicated for the treatment of acute urticaria (hives lasting less than six weeks), in adults and children 6 months of age and older.

Coverage Guidelines

Authorization may be granted for members who are currently receiving treatment with Quzyttir, excluding when the product is obtained as samples or via manufacturer’s patient assistance programs

OR

Authorization may be granted if the member meets all following criteria and documentation has been submitted:

1. Member is \geq 6 months of age
2. Prescriber is an allergist/immunologist or dermatologist, or consultation notes from an allergist/immunologist or dermatologist regarding the diagnosis and treatment recommendations are submitted
3. Member has had an inadequate response to IV diphenhydramine

Continuation of Therapy

Reauthorization may be granted for members who have met the initial criteria and documentation of clinical response has been submitted (e.g. reduction of symptoms).

Limitations

Initial approvals and reauthorizations will be granted for 3 months.
