### Overview
Rinvoq is a Janus kinase (JAK) inhibitor FDA indicated for moderately to severely active rheumatoid arthritis. Janus kinase (JAK) enzymes, are intracellular enzymes involved in stimulating hematopoiesis and immune cell function through a signaling pathway. JAKs activate signal transducers and activators of transcription (STATs) which regulate gene expression and intracellular activity. The inhibition of JAKs prevents the activation of STATs.

### Coverage Guidelines
Authorization may be granted for members who are currently receiving treatment and are stable with Rinvoq excluding when the product is obtained as samples or via manufacturer’s patient assistance programs

OR

Authorization may be granted for members when all of the following criteria are met, and documentation has been provided:

1. The member is at least 18 years of age
2. The member has diagnosis of moderately to severely active rheumatoid arthritis
3. The member has experienced an inadequate response to at least a 3-month trial of methotrexate despite adequate dosing (i.e., titrated to 20mg/week) OR
4. The member has an intolerance or contraindication to methotrexate (see Appendix A)

### Continuation of Therapy
Reauthorization may be granted when documentation has been submitted supporting clinical improvement in member’s condition.

### Limitations
399 Revolution Drive, Suite 810, Somerville, MA 02145 | allwayshealthpartners.org
