Overview

Ravulizumab is a humanized monoclonal antibody which is a terminal complement inhibitor that specifically binds to the complement protein C5 (with high affinity), inhibiting its cleavage to C5a (the proinflammatory anaphylatoxin) and C5b (the initiating subunit of the terminal complement complex [C5b-9]) and preventing generation of the terminal complement complex C5b9. The C5 inhibition of complement-mediated hemolysis achieved by ravulizumab in patients with paroxysmal nocturnal hemoglobinuria is immediate, thorough, and sustained.

Coverage Guidelines

Authorization may be granted for members who are currently receiving treatment with Ultomiris, excluding when the product is obtained as samples or via manufacturer’s patient assistance programs

OR

Authorization of Ultomiris will be granted if the member meets all following criteria and documentation has been submitted:

1. The member is at least 18 years of age
2. The member has a diagnosis of paroxysmal nocturnal hemoglobinuria
3. The member has received a meningococcal vaccine at least two weeks prior to treatment initiation
4. Requested dosing is appropriately weight-based per FDA guidelines

Limitations

1. Approvals will be granted for 12 months
